## Verizon Jetpack 4G LTE Mobile Hotspot Mifi 6620L

Don't leave your Wi-Fi-enabled devices behind when you're away from your home or office. Keep them connected with the exclusive Verizon Jetpack MiFi 6620L.

The 4G LTE Mobile Hotspot gives you a secure connection to America's largest and most reliable 4G LTE network. Connect up to 15 Wi-Fi-enabled devices, including tablets, laptops, cameras, gaming consoles, music players and wearables.

The powerful 2-in-1 battery not only keeps the Jetpack running but also helps power up your external devices. Stay connected for up to 20 hours. The Jetpack also doubles as a universal charger for external devices that are connected, meaning you can check email, video chat and more from your Wi-Fi-enabled devices longer.

# Verizon Mobile Device Management

Enterprise firmware  
over-the-air management,  
device diagnostics and  
broadband hotspot  
management solutions  
that deliver more  
power and flexibility  
to your business.

Today, businesses are integrating more mobile devices and applications into their everyday workspaces to give employees flexibility to work any time, virtually anywhere. An increase in mobility can bring more business opportunities, but it can also create more challenges for your IT team. For each mobile device, your IT team is responsible for maintaining updates and capabilities, as well as making sure critical devices and applications have the most uptime.

To help bring continuity to your business and streamline IT operations, Verizon Mobile Device Management (MDM) enables enterprise firmware over-the-air (FOTA) management, device diagnostics and broadband hotspot management services. Using FOTA management, IT can postpone and assess customer/corporate applications on new device firmware updates to their devices prior to large-scale deployment, which can improve overall efficiency. With Verizon's robust device diagnostics tool, IT can download and monitor diagnostic data from mobile devices. Broadband Hotspot Management allows enterprises to manage Jetpack® mobile hotspot devices and USB devices over the air in order to secure their corporate assets. These capabilities are housed within a single pane of glass in the solution's centralized interface. As your mobile workspace and IT needs continue to grow and change, Verizon MDM evolves, too, bringing new services and features to your interface to provide a reliable and innovative experience.

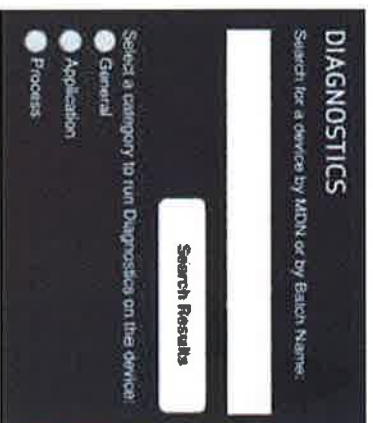

## Verizon MDM possibilities

A leading HVAC company wanted to learn the causes of device failures, while also seeking a method to assess their custom applications on new firmware updates. Using Verizon MDM, it can schedule firmware updates for each device through a single portal before sending them to the device. Plus, the built-in device diagnostic information helps IT determine reasons for failing mobile devices, which helps keep devices operational and employees productive.

## Beyond ordinary MDM

Our solution provides unique capabilities only available through the Verizon network:

- **Single-user interface.** Experience a single, unified portal, where you can manage all devices and access device diagnostics 24/7.
- **Enterprise FOTA.** Keep track of which devices are up to date; postpone and schedule firmware updates to your devices.<sup>1</sup>
- **Device diagnostics.** Access online, near real-time technical device data that can help improve device troubleshooting and avoid costly downtime.<sup>2</sup>
- **Broadband hotspot management.** Manage security profiles and settings on selected Jetpack and USB devices.

## More business benefits

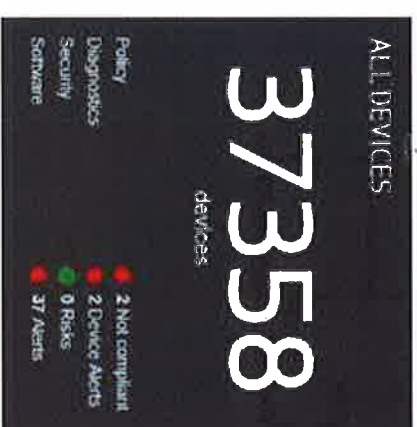

Verizon MDM offers the following benefits:

- Enable mobile device freedom, maintain productivity and increase employee satisfaction.
- Help reduce the cost of supporting mobile assets.
- Enhance overall application and performance management.
- Help secure corporate devices and prevent unauthorized access.

With device diagnostics, enterprise FOTA management and Broadband Hotspot Management, you will also experience additional benefits, like the ability to:

- Manage device diagnostics and software upgrades from a single portal without any additional investments in hardware.
- Improve the reliability and security of customer devices and application risk-management capabilities. Increase end-user satisfaction and decrease customer technical-support requirements.
- Minimize risk to application and device performance and boost uptime by assessing provider updates and enterprise apps prior to deployment.

Broadband Hotspot Management adds additional capabilities, to include:

- Centrally manage select Jetpack and USB devices via the Verizon MDM portal.
- Policies for each Jetpack device are managed and stored in the cloud.
- Prevent users from changing settings, configure security settings remotely and restrict device connections.
- Group devices and apply policies based on departments, locations or roles.
- Currently supports: Verizon Jetpack MiFi® 4620L/LE, Verizon Jetpack MiFi 6620L and Verizon USB 620L.

### Why Verizon

When you choose Verizon MDM, you get an experience that adds flexibility, simplicity and power to your business automation. We are innovators committed to giving you an intuitive MDM experience with unique features only available through the Verizon network.

# Kajeet Managed Education Broadband™ Program

**A turn-key program managed by education broadband experts!**

Kajeet enables schools and districts to provide off-campus connectivity for disadvantaged students -- without worry of abuse. The Kajeet SmartSpot™ is a portable 4G LTE Wi-Fi hotspot each student can take home to complete required assignments and homework.

- Maximize the potential of your 1:1 or BYOD programs.
- Increase student performance.
- Level the digital playing field for economically disadvantaged students.
- Keep students focused on academic-related content.

## **No need to worry about burdening your staff**

In the *Kajeet Managed Education Broadband Program*, districts and schools leverage Kajeet's expertise in designing and deploying off-campus, academic Internet connectivity. Simply choose the number of Kajeet SmartSpots™ and the number of months of service required. Kajeet assigns an experienced Education Program Manager (EPM) to serve as an extension of the district team to manage and administer the program including: policies and filters for student use for specific academic content; time of access restrictions; data consumption and site monitoring; program analysis and reporting; and much more!

## **Filtered education broadband access and fair use policy**

Under this turn-key program, the school or district is not limited on bandwidth for educational sites. However, the Kajeet Managed Education Broadband Program is intended for educational use only with one device per student. In the event Kajeet detects bandwidth consumption inconsistent with educational use, Kajeet may temporarily block such service while conducting further review. This learning system allows Kajeet to continually refine our solution to deliver the most cost-effective education broadband service possible and to identify new potential threats to students quickly and efficiently.

## **All inclusive, pre-paid pricing with no billing risks**

- No monthly bills
- No overage charges
- No early termination fees
- Tiered pricing based on quantity volumes
- Under the Kajeet Managed Program, a district can choose to purchase their own hardware or lease Kajeet owned equipment.

## **Examples of Blocked Sites:**

- Pandora
- Netflix
- Hulu
- Non-education YouTube
- Facebook
- Instagram
- Twitter
- Pogo
- Gaming sites
- Commercial YouTube
- All adult & inappropriate content

## **Examples of Allowed Education Sites:**

- Blackboard
- Wikipedia
- Google
- Edmodo
- Moodle
- Study Island
- SchoolTube
- TeacherTube
- ABC Ya
- Study Island
- Atomic Learning
- Socrative
- And thousands of other whitelisted sites!

The portable Kajeet SmartSpot and Sentinel Portal allow for complete control of the student's off-campus academic Internet experience

**Find out how you can implement a cost-effective solution to bridge your digital divide.**

## Kajeet Managed Education Broadband includes these core features:

### Standard Features:

- Nationwide 4G LTE mobile broadband.
- Fully kitted and activated devices, delivery, account set-up, training, and user guides.
- Data usage for your program's devices.
- CIPA-compliant filtering for education-only access.
- Supports the latest, most advanced security.
- Compatible with all industry-standard Wi-Fi capable devices across all operating systems.
- Industry-standard Wi-Fi (802.11 b/g/n).
- Long battery life provides up to 10 hours of use on a single charge.
- Padded Kajeet SmartSpot™ carrying case.

### Accounts with 100 devices or more:

- Assignment of an experienced Education Program Manager for on-going account management, reporting, and technical support.
- **FREE** Private Sentinel® Account with custom controls.
  - Data filtering based on categories or specific URLs.
  - Time-based policies allow differentiation for school, home, or bedtime.
  - Reporting and analytics.

### Optional Services:

- Accounts with fewer than 100 devices: \$1,500 fee if a private Sentinel® Account with custom filtering, controls and reporting is required.
- *White Glove* Service includes direct-to-student device shipping & collection and Tier 1 customer support line.
